
PROFESSIONAL SUMMARY

Technical Lead with 6 years of experience in Python backend development, microservices, REST APIs, and distributed systems. Strong hands-on expertise in Python, FastAPI, Django, Kafka, Redis, WebSocket, AWS, OpenShift, Docker, and SQL/NoSQL databases. Experienced in designing scalable backend services, authentication and authorization systems using Keycloak and JWT, real-time event-driven applications, system integrations, performance optimization, and reliability engineering. Proven experience leading Agile teams and delivering secure, scalable, and reliable backend solutions.

TECHNICAL SKILLS

- **Languages** : Python, C, JavaScript, PHP
- **Frameworks & Libraries** : FastAPI, Django, Flask, Node.js, Express.js, TypeScript, NumPy, Pandas
- **APIs & Architecture** : REST APIs, Microservices, API Integration, Authentication & Authorization, JWT, Keycloak
- **CRM/CMS** : HubSpot, Salesforce, Strapi
- **Databases** : MySQL, PostgreSQL, MongoDB, Oracle
- **Cloud & DevOps** : AWS, Red Hat OpenShift, Docker, Jenkins, GitHub Actions, Argo CD, CI/CD
- **Messaging & Real-Time** : Confluent Kafka, Redis, WebSocket
- **Testing** : Pytest, Unit Testing
- **Development Tools** : Git, GitHub, JIRA, ClickUp
- **AI Development Tools** : ChatGPT, Claude, Cursor, Microsoft Copilot

EXPERIENCE

- **Tech Mahindra** Noida, IN
Technical Lead *January 2026 - Present*
 - **Authentication Platform**
 - Built a centralized Keycloak-based authentication microservice to validate and authorize users across multiple microservices, standardizing authentication across the platform.
 - Packaged shared authentication logic as a versioned Git submodule, enabling local validation across microservices and eliminating unnecessary network calls for shared auth checks.
 - Implemented JWT caching with offline-validation fallback, maintaining authentication for up to 3600 seconds during Keycloak outages and eliminating Keycloak as a single point of failure.
 - Reduced authentication overhead by implementing local JWT validation, eliminating per-request network calls to Keycloak and improving service resilience during Keycloak outages.
 - **CMS Platform & Migration Tooling**
 - Built a Strapi CMS instance from scratch, implementing content-type modeling, role-based permissions, and a Git-based autosync pipeline for schema and configuration changes across environments.
 - Designed migration scripts to move an entire Strapi instance — database, media library, and config — between environments in one automated run, cutting migration time from hours to 15-20 minutes.
 - **AI-Assisted Development**
 - Leveraged AI coding assistants (Cursor, ChatGPT, Microsoft Copilot, Claude) for code generation, test-case creation, debugging, and documentation, improving development efficiency and reducing repetitive development effort.

• IBM

Noida, IN

Application Developer

May 2023 - January 2026

ADMS Integration

- Developed event-driven Python microservices that consumed client data from Confluent Kafka, performed ETL-based transformation and validation, and delivered processed data to ADMS for crew and vehicle operations.
- Built and deployed scalable microservices using Python, FastAPI, TypeScript, Confluent Kafka, Redis, REST APIs, Oracle, AWS, OpenShift, and Argo CD, supporting reliable event-driven data processing across the integration pipeline.
- Built WebSocket-based microservices for real-time communication, delivering live crew and vehicle status updates to consuming services and eliminating the need for polling-based communication.

Reliability & Observability

- Implemented Redis caching for frequently accessed crew and vehicle information, reducing redundant Oracle/ADMS lookups and improving performance across the microservice integration pipeline.
- Implemented structured logging and centralized error handling using Python logging, Kibana, and Splunk, using Kafka message IDs as correlation IDs and appropriate log levels to improve traceability and production issue diagnosis across microservices.

• CEDCOSS Technologies

Lucknow, IN

Software Engineer

March 2020 - March 2023

CRM Integration Platform

- Developed Python-based integrations with HubSpot to synchronize users, orders, and product data between client websites and the CRM platform, ensuring consistent data flow across systems.
- Developed and optimized backend applications using Python, Django, and MySQL, implementing automated data validation to improve data accuracy and minimize errors during CRM synchronization.
- Collaborated with marketing, sales, and support teams to translate business requirements into CRM features and workflow improvements.

CERTIFICATIONS

- **Cloud:** AWS Certified Cloud Practitioner, IBM Cloud Advocate
- **Confluent Kafka:** Confluent Certified Developer for Kafka.

EDUCATION

• **R.R Institute of Modern Technology**

Lucknow, IN

Bachelor of Technology in Computer Science Engineering

Aug. 2016 – Sep. 2020
